This resource includes all of the brachytherapy information from Revenue Cycle Coding Strategies Navigator® for Radiation Oncology as well as general radiation oncology coding and billing guidelines. The guide provides a close look at this extraordinary and highly technical area in radiation oncology. This Navigator® includes a supplements designed to keep you up-to-date and provide useful information on changes and clarifications to codes, coding guidelines, billing requirements, and other key areas of concern.

This edition of ICD-0, the standard tool for coding diagnoses of neoplasms in tumour and cancer registrars and in pathology laboratories, has been developed by a working party convened by the International Agency for Research on Cancer / WHO. ICD-0 is a dual classification with coding systems for both topography and morphology. The book has five main sections. The first provides general instructions for using the coding systems and gives rules for their implementation in tumour registries and pathology laboratories. Section two includes the numerical list of topography codes, which remain unchanged from the previous edition. The numerical list of morphology codes is presented in the next section, which introduces several new terms and includes considerable revisions of the non-Hodgkin lymphoma and leukaemia sections, based on the WHO Classification of Hematopoietic and Lymphoid Diseases. The five-digit morphology codes allow identification of a tumour or cell type by histology, behaviour, and grade. Revisions in the morphology section were made in consultation with a large number of experts and were finalised after field-testing in cancer registries around the world. The alphabetical index gives codes for both topography and morphology and includes selected tumour-like lesions and conditions. A guide to differences in morphology codes between the second and third editions is provided in the final section, which includes lists of all new code numbers, new terms and synonyms added to existing code definitions, terms that changed morphology code, terms for conditions now considered malignant, deleted terms, and terms that changed behaviour code.

Modern medical imaging and radiation therapy technologies are so complex and computer driven that it is difficult for physicians and technologists to know exactly what is happening at the point-of-care. Medical physicists responsible for filling this gap in knowledge must stay abreast of the latest advances at the intersection of medical imaging and radiation therapy. This book provides medical physicists and radiation oncologists current and relevant information on Adaptive Radiation Therapy (ART), a state-of-the-art approach that uses a feedback process to account for patient-specific anatomic and/or biological changes, thus delivering highly individualized radiation therapy for cancer patients. The book should also benefit medical dosimetrists and radiation therapists. Adaptive Radiation Therapy describes technological and methodological advances in the field of ART, as well as initial clinical experiences using ART for selected anatomic sites. Divided into three sections (radiobiological basis, current technologies, and clinical applications), the book covers: Morphological and biological biomarkers for patient-specific planning Design and optimization of treatment plans Delivery of IMRT and IGRT intervention methodologies of ART Management of intrafraction variations, particularly with respiratory motion Quality assurance needed to ensure the safe delivery of ART ART applications in several common cancer types / anatomic sites The technology and methodology for ART have advanced significantly in the last few years and accumulated clinical data have demonstrated the need for ART in clinical settings, assisted by the wide application of intensity modulated radiation therapy (IMRT) and image-guided radiation therapy (IGRT). This book shows the real potential for supplying every patient with individualized radiation therapy that is maximally accurate and precise.

CPT(R) 2022 Professional Edition is the definitive AMA-authored resource to help healthcare professionals correctly report and bill medical procedures and services.

The CHONC™ study guide offers a comprehensive review of hematology and oncology coding in preparation for the CHONC™ exam. It covers all topics tested in the actual exam and is filled with practical examples; including an E/M chapter with examples that are specialty specific, using 1995 and 1997 CMS Documentation Guidelines. Also included is a 35-question Test Your Knowledge exam with answers and rationales. Key Features: Practical examples Testing techniques for the CHONC™ exam Questions designed to mimic the CHONC™ certification exam Written by the same people who wrote the CHONC™ exam 35 Test Your Knowledge questions with answers and rationales Answer key includes dissection of note for further clarification of proper coding.

## Read Free Oncology Coding Guidelines

This manual is a comprehensive guide to coding medical oncology, hematology, and infusion services. Each chapter discusses documentation requirements, coding guidelines, bundling rules, compliance issues, and coverage restrictions. Topics covered by this Navigator® include: chemotherapy coding guidelines, coding guidelines for diagnostic and therapeutic infusions and injections, coding for hydration infusion pumps, visit services in conjunction with infusions, bone marrow and stem cell services, vascular access procedures, transfusions, drug guidelines, medical necessity and time reporting guidelines for facility drug administration services.
