Why vector control? Diseases transmitted by vectors account for around 17% of the estimated global burden of communicable diseases. Mosquitoes transmit malaria, dengue, chikungunya, lymphatic filariasis, yellow fever and Zika among other diseases; flies transmit leishmaniasis, onchocerciasis and sleeping sickness; and bugs or ticks transmit Chagas disease, borreliosis (Lyme disease), typhus ...

Vector Control. The term "vector" in the sense of "vector control" usually refers to an arthropod that carries an agent that causes disease. Our goals as a vector control program is to study the dynamics of vector-borne diseases; educate the public and city personnel about vectors, the diseases they carry, how to protect themselves and help us control vectors; and help guide municipalities within Tarrant County on how to conduct proper arthropod-related disease surveillance and control.

Mazda's G-Vectoring Control - SKYACTIV-VEHICLE DYNAMICS | Mazda USA | Mazda USA. At Mazda, we're in constant pursuit of making driving better. That's why we developed a new technology, SKYACTIV-VEHICLE DYNAMICS with G-Vectoring Control, to help achieve a smoother, less fatiguing drive. When cornering, on initial turn-in and throughout, the system works seamlessly by adjusting power delivery and shifting vehicle weight.

When driven by a field-oriented controller, also known as a vector controller, LIM behaves like a separately excited DC machine where flux and motion dynamics are controlled independently in order to achieve high performance from the IM drives. The vector control method provides velocity and position control of a LIM effectively.

Vector control is any method to limit or eradicate the mammals, birds, insects or other arthropods (here collectively called "vectors") which transmit disease pathogens. The most frequent type of vector control is mosquito control using a variety of strategies. Several of the "neglected tropical diseases" are spread by such vectors.

The impact of awareness on dengue dynamics has been studied by Gakkhar and Chavda (Gakkhar & Chavda, 2013). In order to study the impact of human awareness and vector control, we construct a Zika model including both vector and sexual transmission route, we also include the human awareness (Mishra & Gakkhar, 2014) and vector control. In this work, we have established the wellposedness, positivity and boundedness, the local and global stability of the DFE and the existence and local stability ...
